

Annotation Guidelines

Purpose. These guidelines standardize corpus annotation for BERTRAG.

Segmentation. Split documents into semantically coherent passages while preserving narrative context.

Metadata. Annotate every passage with community, genre, source type, language, temporal context, geographic location, validation status, cultural sensitivity, and governance flag.

Quality Control. All annotations should undergo independent review by a second annotator. Disagreements are resolved through discussion and, if required, adjudication by a senior reviewer.

Translation. Preserve semantic meaning rather than literal wording and retain culturally significant expressions where appropriate.
