

Statistical Analysis

Statistical significance was evaluated using paired bootstrap hypothesis testing.

Bootstrap procedure:

- 10,000 paired bootstrap resamples.
- Resampling over evaluation queries with replacement.
- Two-sided exact p-values. • 95% percentile bootstrap confidence intervals.

Effect sizes: Cohen's d was reported alongside p-values.

Sensitivity analysis: Thresholds between 0.85 and 0.95 produced qualitatively similar conclusions.
